

# SHOOTING STAR STORIES

Sometimes we call meteors shooting stars or fireballs. They are rocks from space that are falling very fast to Earth.

**Please help me fill in my observation table about shooting stars**

| Name | Age | How many shooting stars have you seen? | Where have you seen them? | What did it look like? | Drawing |
|------|-----|--|---------------------------|------------------------|---------|
|      |     |  |                           |                        |         |
|      |     |  |                           |                        |         |
|      |     |  |                           |                        |         |
